

BX53LED+MDO

Multi-head Microscope

Multi-head discussion systems are essential for training and education. With the BX53 microscope's LED illumination, up to 26 participants can view clear, bright images.

BX3 Accessories

BX3-RFAA

Motorized fluorescence illuminator

The flexibility of the motorized fluorescence illuminator accommodates multi-color stained specimens. Fly-eye optics provide even, bright illumination.

BX3-URA, BX3-RFAS

Universal reflected illuminator Coded fluorescence illuminator

A total of eight fluorescence mirror unit options can be attached for comfortable multi-color fluorescence observations.

U-AW

Motorized attenuator wheel

The motorized neutral density filter wheel enables intensity adjustment during fluorescence and transmitted light observation.

BX3-UCD8A

Motorized universal condenser

The motorized universal condenser Equipped with a DIC slider slot, this revolving integrates a variety of optical elements to nosepiece enables simultaneous attachment accommodate transmitted light techniques of seven objectives. It is especially suitable including brightfield, differential interference for continuous observations from low to high contrast, and phase contrast observation.magnifications.

U-D7REA

Motorized seven-position nosepiece
