

SZX/SZ Accessories

SZ2-ILST

LED illuminator stand

This LED stand features a thin design to keep sample positions low and optimize operability. Simultaneous transmitted and reflected light are available on this stand. LED light offers a long lifespan and constant color temperature at any intensity.

SZ2-ILA

Transmitted illumination attachment

Used with the SZ2-ST stand, this cost-effective illumination stand offers bright, uniform illumination from low to high magnifications. A tiltable mirror provides direct and oblique illumination for low-contrast specimen. The available 6 W and 100 W lamphouses deliver the necessary power for various illumination needs.

SZ2-CLGDI

Dual interlock light guide

Standard oblique semi-rigid fiber optic light guide. The light source position on the rear side of the stand saves desk space.

SZ2-CLGSF

Flexible light guide

A single fiber optic guide is fixed at the back of the objective so as not to disturb microscope operation.

SZX2-ILLTQ/SZX2-ILLTS

LED Transmitted Light Illumination bases

SZX2-ILLTQ with quad-position turret enables you to choose cartridges and to switch between brightfield (standard/high/low), oblique (standard/high/low), darkfield, polarized illumination, and the shutter with a simple turn. A one-position LED illumination base is also an option (SZX2-ILLTS)

SZX-SDO2

Side-by-Side Discussion Tube

Ample distance (650 mm) between the main and secondary observer for easy imaging without disturbing the microscope operation. The color of the built-in pointer can be selected to contrast the specimen.
